Included Components	CP2012 USB C 38 Pin esp32
Operating System	FreeRTOS
CPU Manufacturer	Espressif

About this item

- ESP32 Breakout Board GPIO 1 into 2 for 38PIN: It is a good substitute for bread boards as well, and can expand one GPIO pin of the ESP32 development board to two; Note: It works only for 38 Pin ESP32 core board, do not work for 30 pin ESP32 and others
- The breakout boards are crafted with a dual-layer layout, ensuring that each pin is securely connected on both sides. This design minimizes the risk of circuit contact issues and enhances signal transmission reliability, making it a superior alternative to traditional breadboards.
- ESP-32 CP2102 Chip Development Board USB-C, 2.4GHz Dual Mode WiFi+Bluetooth Dual Core Microcontroller for Arduino IDE, Support AP/STA/AP+STA (38 PIN Narrow)
- The ESP-32S development board integrates both Wi-Fi and Bluetooth capabilities, supporting 2.4 GHz Wi-Fi and Bluetooth, enabling a wide range of wireless communication and connectivity options.
- ESP32 development board offers a rich set of peripheral interfaces, including GPIO, UART, SPI, I2C, and more, allowing for easy connectivity to a wide range of sensors

Warranty & Support

Amazon.com Return Policy: You may return any new computer purchased from Amazon.com that is "dead on arrival," arrives in damaged condition, or is still in unopened boxes, for a full refund within 30 days of purchase. Amazon.com reserves the right to test "dead on arrival" returns and impose a customer fee equal to 15 percent of the product sales price if the customer misrepresents the condition of the product. Any returned computer that is damaged through customer misuse, is missing parts, or is in unsellable condition due to customer tampering will result in the customer being charged a higher restocking fee based on the condition of the product. Amazon.com will not accept returns of any desktop or notebook computer more than 30 days after you receive the shipment. New, used, and refurbished products purchased from Marketplace vendors are subject to the returns policy of the individual vendor.

Reliable esp32's

Reviewed in the United States on January 31, 2026

Size: ESP32 Type C Dev Board with Breakout Board 2Sets **Verified Purchase**

These are capable and reliable boards and the breakouts are great for prototyping. I've even included the breakout in the device when I'm expecting to change or upgrade the setup. They're cheap enough to just get a new one. I've had 4 of these boards and the all worked great.

Worked but can't power from 5v pin, ONLY USB

Reviewed in the United States on August 1, 2025

Size: ESP32 Type C Dev Board with Breakout Board 3Sets **Verified Purchase**

Boards are handy, but you have to power through USB. All 3 boards would work fine vis USB power, but when trying to power in project through the 5v pin, they constantly rebooted. Had to solder a cheat wire onto the USB VBUS to get the project to work. Other than that its very handy to have screw terminals. I understand this is a common design flaw in these boards.

Extremely handy for prototyping and even building full components

Reviewed in the United States on February 22, 2026

Size: ESP32 Type C Dev Board with Breakout Board 3Sets **Verified Purchase**

I've really enjoyed working with these. Initially, I thought I would just be using them in place of breadboards for prototyping new smart home devices, but I've started to just use them for building things. I have a bunch of ESP-32s that I am now considering trying to find these pre-mounted headers and screw terminals for because this is just so easy to use if you don't need to solder intermediary components (and even when you do in some cases).

Jeff l.

not a great board

Reviewed in the United States on February 6, 2026

Size: ESP32 Type C +Purple Breakout Board 3Sets **Verified Purchase**

the included esp-32 (not wroom like the title and image show) has no psram what so ever. if you are wondering they are nodemcu v1.1 models. even the 1.3 model is considered an old version of that board.
