Product Description

This pre-wired LED is Super small with resin cover to protect, with 10cm wired,Super strong LEDs and wire,
The wire is bendable, it easy to fix any shape as you like

You can connect with any 3V battery directly

All LEDs work in 3-3.3 Vdc
Do not need add any resistor, it can work with normal 3V battery

If you want the LEDs work in other voltage,we provide below resistors in the package too
25 resistors (not pre-soldered) for 3.5~5V are included .
25 resistors (not pre-soldered) for 5~9V are included .
25 resistors (not pre-soldered) for 9~14V are included .

Specifications :
The LEDs size is : (length)06" X '03"(width) X 03"(height)
-Luminance intensity: 300 mcd / 120¡ã Viewing Angle
-Emitting color: UV
-Forward voltage:3-3.3VDC Compatible.
(if you need the LEDs work in other voltage, please add resistor)
-Forward current Typical: 15mA or below; Max: 20mA
-Viewing angle:120¡ã Viewing Angle
Applications & Installations:
Suitable used in any small model, cosplay, small model building, Very low power consumption, and high luminous intensity
Recommended voltage is 12V

Package included :
25pcs pre-wired SMD LEDs (pre-soldered) with 10cm wire length
25 resistors (not pre-soldered) for 3.5~5V are included .
25 resistors (not pre-soldered) for 5~9V are included .
25 resistors (not pre-soldered) for 9~14V are included .

How customer reviews and ratings work

Customers say

Customers find these LEDs well-built and bright, with one noting they work perfectly with 3-volt batteries. The product comes with a variety of resistors for different voltages, and customers appreciate their perfect size for headlights and taillights, making them ideal for model projects and miniature scenes. The wire length receives mixed feedback, with several customers noting the wires are too thin, though one customer describes them as expertly wired with enameled wire.

Awesome Lights for HO layout

Reviewed in the United States on February 7, 2026

Color: (2)Warm White Size: 25pcs **Verified Purchase**

These lights are awesome. I use them all over my HO layout for light poles, also great for ditch lights on locomotives because they're so small.

The wires are insulated so they won't short, they do need resistors installed but they come with them!

Mac

Perfect lighting that's nearly Invisible

Reviewed in the United States on February 8, 2025

Color: (2)Warm White Size: 25pcs **Verified Purchase**

I bought this for model lighting and what a pleasant surprise. They are almost microscopic but provide a lot of light for the size. Only requires about a 1mm hole. The positive lead has insulating varnish. There are separate sets of resistors included for a wide range of voltages (3V to 16V). They are a warm color temperature (estimate 2800K-3000K). I use a 12VDC bus for lighting.

Solder the resistor for your voltage, drill a small hole, add a little PVA to hold in place and done. Thank you, seller.

Repeatauto

Limited use for small spaces

Reviewed in the United States on January 29, 2025

Color: (2)Warm White Size: 100pcs **Verified Purchase**

The lights work well and produce a bright warm clean light. They used a stiff wire that interfers with mounting in tight spaces. Like HO scale headlight housings. I was able to use them in number boards more easily and they will and do work well in hidden spaces. The 0603 light head is too big with the wires attached. They are also mounted in a small drop of resin which may make them waterproof and better suited for lighting drones. They various colors are well suited for signal heads. I won't be purchasing the white lights again due to room constraints but not do to any other issue. They seem to be good quality

Update 04/23/2020:
Wanted to update this review as I'm buying the $30 multi pack now, so I added a few more pics to this to show how this looks on my RG Sazabi and my RG Nu Gundam. I've since learned I prefer using a 3V coin battery rather than an old iPhone cable. Since these SMDs are made for 3v I don't have to add a resistor to my circuit. In case anyone is wondering I didn't have to mod my RG Sazabi at all for the SMD to fit. All I did was used magnet wire (thinnest wire you can get) and since theres empty space within the cockpit in the head, all I had to do was secure the SMD in there. The photos I used are before I tried the magnet wire and 3v coin. I'm still learning and I'm getting better at this. The RG Nu Gundam I used a pin vise and drilled a small hole in the clear plastic piece used for the eyes and was easily able to put it in and run the magnet wire. On a 3v coin battery alone I was able to have the eye powered up non stop for about a full week until it started to lose luminance. Building a custom MG Sazabi now and playnning on light everything up with these.

Great Tiny LEDs

Reviewed in the United States on February 22, 2026

Color: (6)Golden Yellow Size: 50pcs **Verified Purchase**

Got these for a project to make tiny houses for jumping spiders so they could have a little light. Perfect for DIY projects requiring a small form factor.

Mark

Tiny and Bright!

Reviewed in the United States on July 24, 2025

Color: (4)Red Size: 25pcs **Verified Purchase**

Incredibly bright for their size, almost hard to look at directly. Very easy to work wit, they have nice long leads. Not much else to say, if you need small LEDs, these are great! Come with appropriate resistors.

ED

Small led lights

Reviewed in the United States on December 13, 2025

Color: (2)Warm White Size: 25pcs **Verified Purchase**

Works great . Used many for small projects. I think the Chinese meant to say they are POWERFUL in the the description not BOWERFUL.
